

EVONET

Telephone & Data Network Consultants

Whichever sector your business is in, you need clear communications with your customers and suppliers, and internally within the company.

Evonet has been helping people communicate, by designing, implementing and extending voice and data networks for companies from the very smallest to the very largest (BP, BT, MCI Worldcom) since 1987.

Seamless, secure voice and data communication is now easy and highly cost-effective – across several sites, and to employees on the road or at home.

No matter what stage you are at in the development of your communications infrastructure, or how small or dispersed your organisation, Evonet can make a valuable contribution:

- For small to medium projects, we can deliver a complete solution, on budget and on time.
- For large projects, we can write the spec, manage the tendering process, and monitor the delivery for you.

We will involve your existing IT/telecoms support staff in what we do, so as not to undermine their status or sense of ownership. We will of course also build on your existing IT/telecoms investment wherever possible.

If you're feeling phased by jargon like 'IP Telephony', 'VoIP', 'Converged Networks', let us take the mystery out for you! We would be pleased to give you a free initial meeting.

Evonet Limited, St. John's Innovation Park, Cambridge CB4 0WS
